

BotBanish Pre-Install Check (v4.1.00):

1. **Download the BotBanish_PreInstall.zip file.**
2. **Unzip and upload the file to the server where you will install BotBanish.**
3. **Open a browser and navigate to the file to run in the browser.**
4. **BotBanish Pre Install will show you what is loaded on your system and what you need to load to get BotBanish to run properly.**

It does not matter where you upload the BotBanish Pre-Install program, it will be able to run.

Chances are that you already have all that you need loaded but sometimes hosting companies do not load everything and, in the case, where you operate your own server, the default profile may not contain all extensions and function and you may need to install them.
